

Introduction to Agile Scrum

The Agile Scrum Introduction Education is a training program intended to provide participants with a deep understanding of Agile methodology and introduce the Scrum Framework. Scrum is one of the most common Agile frameworks in software development, while Agile is a flexible, collaborative, and responsive project management approach to change. Students will learn about the principles of Agile and the values of the Agile Manifesto. They will also learn how to apply these principles in the software development process. Additionally, participants will understand why Agile is increasingly important in rapidly changing business environments and how this method helps companies become more flexible and responsive to market changes.

During the training, participants will gain a profound understanding of the Scrum framework, which is the most common Agile framework for software development.

They will also learn the roles and responsibilities of each Scrum team member, including the Product Owner, Scrum Master, and Development Team. They will also learn about Scrum artifacts, such as the Sprint Backlog, Product Backlog, and Increment, as well as Scrum processes, such as Sprint Planning, Sprint Review, and Sprint Retrospective. Furthermore, this training will provide case studies, group discussions, and practical exercises to help participants apply Agile and Scrum concepts in real-life situations. They will learn how to use Scrum for project planning and estimation, as well as how to use relevant metrics to measure and monitor project progress.

AGILE SCRUM INTRODUCTION TRAINING

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy nibh euismod

Agile Essentials with Scrum Framework

The Agile Essentials Training with the Scrum Framework will help participants become better software development team members and understand the benefits of Agile, assisting companies in becoming more creative.

Target Participants :

Software Development Teams

The primary audience for this training is software development teams. They are crucial for implementing Agile methodologies and the Scrum Framework in software development.

Project Managers

Individuals responsible for ensuring successful and timely project completion are project managers. They can manage projects more efficiently and adaptively by understanding the Agile and Scrum framework.

Product Owners

Business stakeholders responsible for communicating business needs and determining the most important features in software development are product owners. This training enhances their collaboration with the development team and helps them understand their role in the Scrum Framework.

Scrum Masters

Scrum Masters are facilitators who help Scrum teams adopt and effectively run the Scrum process. They receive training to understand their role and how to manage teams within the Scrum framework.

Project Team Members

Apart from developers, other team members involved in software development or business projects, such as business analysts, system architects, or quality assurance teams, can attend this training.

Business Stakeholders

Business stakeholders who want to understand how Agile and Scrum methodologies can address changes and ensure that business needs are met.

Individuals Interested in Agile Methodology

This training can be appealing to those who want to gain additional knowledge about Agile and Scrum principles or prepare for work in the IT or project management industry.
